

AMIT RAJ DEV

Data Analyst | AI Governance & Cloud Data Systems

Toronto, ON | +1 (647) 407-4635 | devamit493@gmail.com
linkedin.com/in/ amitdevraj | amitrajdev.com.np | github.com/Adwrells

PROFESSIONAL SUMMARY

Data Analyst with 4+ years of combined experience across analytics, cloud infrastructure, and IT operations, including an AI governance and bias-detection platform for healthcare data and a completed M.Sc. capstone analysing 175.8 million Canadian emergency department visits. Completing an M.Sc. in Data Analytics at the University of Niagara Falls Canada (Oct 2026). Turns raw, messy datasets into executive-ready dashboards, statistically defensible findings, and fairness-audited models. Skilled in Python, SQL, AWS, Docker, and statistical inference; holds Google and IBM data analytics credentials. Seeking to bring precision analytics, responsible-AI rigor, and an audit-ready mindset to a Big 4 advisory or assurance practice.

CORE COMPETENCIES

Analytics & Data: Python (Pandas, NumPy, SciPy, Matplotlib, Plotly), SQL, Predictive & Descriptive Modelling, Data Cleaning & Preprocessing, Feature Engineering

Statistical Methods: Non-Parametric & Frequency-Weighted Hypothesis Testing (Kruskal-Wallis, Mann-Whitney U, Chi-Square), Weighted Least Squares Regression, Effect-Size Reporting, Mann-Kendall Trend Detection, Exponential-Smoothing Forecasting

AI Governance & Fairness: Bias Detection, Demographic Parity, Disparate Impact, Equalized Odds, Calibration Error, Model Threshold Optimization, Responsible AI Auditing

Visualisation & BI: Flask/Plotly.js and React/TypeScript Dashboards, Interactive Web Dashboards, Executive KPI Reporting, Statistical Reporting, Excel / Google Sheets

Cloud & Infrastructure: AWS (IAM, KMS, EC2, S3, CodeDeploy), Docker, GitHub Actions CI/CD, FastAPI, SQLite, Linux (OpenVPN, Firewall), ADDS, Active Directory

Networking & Security: IP/MPLS, FTTH, NMS Monitoring, CCTV/Biometric Systems, GNS3, EVE-NG, Packet Tracer

Soft Skills: Stakeholder Communication, Cross-functional Reporting, Audit-ready Documentation, Training & Facilitation

PROFESSIONAL EXPERIENCE

Platform & Operations Lead Intern – DDFA Platform (Data Analyst)

Feb 2026 – Present

Synod Intellicare | Brantford, ON

- Served as Platform & Operations Lead on the DDFA (Data-Driven Fairness Assessment) Platform, a healthcare AI governance and bias-detection system built with Python, Flask, AWS, Docker, GitHub Actions, and SQL.
- Built an end-to-end ML fairness pipeline (logistic regression, model calibration, threshold optimization) computing bias metrics — Demographic Parity, Disparate Impact, Equalized Odds, and Calibration Error — to support clinical AI governance decisions.
- Designed and delivered a real-time clinical governance dashboard (Flask + Plotly.js), giving 10+ stakeholders instant visibility into model fairness, system load, and project metrics, replacing manual status emails entirely.
- Executed end-to-end data cleaning pipelines (missing-value imputation, format standardization, anomaly removal) across 3 environment datasets (Dev / Staging / Production) and Synthea synthetic healthcare data, achieving fidelity sufficient for production-grade BI reporting.
- Hardened cloud security posture by implementing IAM access controls and KMS secrets management across 3 partitioned AWS environments, reducing unauthorized access risk and laying groundwork for SOC 2-aligned data governance.
- Engineered AWS CodeDeploy and GitHub Actions CI/CD pipelines that standardized deployment and release workflows, accelerating data pipeline iteration cycles and cutting manual deployment steps.

IT Support Engineer (Freelance)

Dec 2023 – Jan 2025

A.R.D. Nirman Sewa & IT Solutions | Nepal

- Delivered end-to-end IT support and network troubleshooting for small-to-medium business clients, maintaining near-continuous uptime across multi-site environments with zero reported critical outages during engagement.

- Designed and documented operational processes for client IT environments, producing structured technical reports used for ongoing maintenance planning, building a foundation in audit-trail documentation aligned with consulting delivery standards.

Information Technology Support Engineer

Dec 2022 – Nov 2023

DishHome | Kathmandu, Nepal

- Resolved 90%+ of an average 10–15 daily technical tickets within SLA targets, consistently exceeding first-contact resolution benchmarks across Tier 1 and Tier 2 incidents.
- Monitored and maintained full-stack infrastructure (DC, IP/MPLS, FTTH network, and servers) on a 24×7 shift rotation using multiple NMS platforms, ensuring continuous service for a large-scale ISP subscriber base.
- Deployed and secured 100+ CCTV cameras and 50+ biometric access control devices, delivering measurable improvements in facility security monitoring and operational oversight.
- Implemented Active Directory Domain Services (ADDS), certificate-based AppLocker policies, and OpenVPN support on Linux, strengthening endpoint security and access governance across the organization.

Product Training Executive

Feb 2020 – Jan 2022

CGCorpGlobal (CG Electronics) | Kathmandu, Nepal

- Led technical product research and delivered structured training programs for LG Electronics products, equipping sales and support teams with knowledge that directly supported customer satisfaction and sales performance.
- Developed training materials and curricula aligned to product specifications, demonstrating an early aptitude for translating complex technical information into clear, structured communication — a core Big 4 consulting competency.

CAPSTONE & ACADEMIC PROJECTS

Emergency Department Length-of-Stay Analytics Platform — DAMO 699 Capstone

Summer 2026

University of Niagara Falls Canada | Team of 3 | Python, FastAPI, React/TypeScript, SQLite, Docker, AWS

- Delivered a full-stack emergency-department performance analytics platform over 19 fiscal years of Canadian Institute for Health Information (CIHI) NACRS data — 10,685 aggregate reporting rows representing ~175.8 million ED visits — covering the full analytics lifecycle from ingestion to executive reporting.
- Engineered a frequency-weighted, non-parametric testing framework (weighted Kruskal-Wallis, Mann-Whitney U, weighted least squares, chi-square) across five pre-registered hypotheses, quantifying inpatient access block as the dominant driver of ED length of stay (10.60 h admitted vs 2.50 h non-admitted, rank-biserial 0.998).
- Built 19-year trend and forecasting models (Mann-Kendall $Z = 5.60$, $p < .0001$; exponential smoothing with 95% prediction intervals) and designed an original Estimated Resource Burden Index combining patient acuity with visit duration, evidencing rising system strain beyond raw volume growth.
- Shipped the platform to AWS EC2 through a Dockerised GitHub Actions CI/CD pipeline with JWT-secured APIs and 299 automated tests across 20 suites, delivering an interactive executive dashboard, PDF report export, and a 70+ page consulting-style final report with a phased implementation roadmap.

EDUCATION

Master of Data Analytics

Apr 2025 – Oct 2026

University of Niagara Falls Canada | Niagara Falls, ON

Relevant coursework: Predictive Modelling, Data Mining, Statistical Inference, Cloud Data Systems

Capstone (completed Sep 2026): "Explanatory and Predictive Analytics of Emergency Department Length of Stay and Resource Utilization Trends in Canadian Hospitals"

Bachelor of Technology

2015 – 2019

Aditya Engineering College | Andhra Pradesh, India

CERTIFICATIONS

- Google Data Analytics Certificate — Foundations: Data, Data, Everywhere
- IBM Data Fundamentals
- Google IT Support Professional Certificate
- IT Security: Defense against the Digital Dark Arts (Google)
- The Bits and Bytes of Computer Networking (Google)
- Additional Badges: Cisco, Microsoft (active pursuit of PL-300 Power BI Data Analyst Associate)
